

This document provides additional assistance with wiring your Extron IP Link Pro Control Processor to your device. Different components may require a different wiring scheme than those listed below.

For complete operating instructions, refer to the user's manual for the specific IP Link Pro Control Processor or the documentation supplied by the manufacturer of the controlled device.

For more information on using Global Scriptor Modules, refer to the "[Guide to Using Scriptor Modules](#)" document.

## Device Specifications

## Global Scripter Module Communication Sheet

---

1_4_1_2	9/5/2017	Updated control and comm sheet notes.
1_4_1_1	4/24/2017	Updated module to support control of multiple cameras. Update Device Reply Port to 0 and added a Server to support camera status.

## Module Notes

- Unidirectional variable must be set to 'True' if status is not required. Default value is 'False'.  
Example: `InterfaceName.Unidirectional = 'True'`
- connectionCounter variable must be set to the number of queries that will be sent to the device before displaying 'Disconnected' if no response is received. Default value is 15.  
Example: `InterfaceName.connectionCounter = 5`
- DeviceID variable must be set accordingly. Default value is '1'. DeviceID ranges from '1' to '7', and Broadcast. If Device ID is set to 'Broadcast', status is unavailable.  
Example: `InterfaceName.DeviceID = '1'`
- **Important note for Ethernet only**  
After importing the module, the method `StartDataDispatch` must be called before instantiating the module object. This method creates and starts the server which is required to obtain status from the device.  
Example:  

```
# Import module
from sony_camera_SRG_300_Series_v1_7_0_0 import EthernetClass as camera

# Method call to create/start server
camera.StartDataDispatch()

# Module object instantiation
client1 = camera('192.168.254.1', Model = 'SRG-300H/W')
client2 = camera('192.168.254.2', Model = 'SRG-300H')
```

## Network communication

When configuring the Ethernet module, be sure device settings match those of the Global Scriptor ethernet interface.

**Port Type:** Ethernet (UDP)

**Device Listen Port:** 52381

**Device Reply Port:** 52381

**Logon Credentials Supported:** No

**Multi-Connection Capabilities:** Yes

**Listen Port Changeability:** Yes

**Reply Port Changeability:** Yes

---

---

## Ethernet Module Configuration Description

- Please refer to user manual for settings and changes to the network communication parameters such as Port Number.
- When using multiple UDP modules within the same configuration each driver should have a unique 'Reply on Port' number due to the nature of UDP communication. If you have a driver with a fixed 'Reply on Port' number, only one instance of the driver can be used within the configuration.

## Notes for the Device

To ensure the functionality of the module, please set DIP switch 1 on the camera to ON. For ROM Versions of 2.10 use the Device Reply Port of 52381. For ROM Versions below 2.10 use the Device Reply Port 52380 and if not successful use 52381.
